U.S. Department of Commerce issues award to NorthStar Earth & Space

In recognition of NorthStar's investments and contribution to the Canada-US relationship

Montreal, Canada, 7 October, 2020 / - NorthStar Earth & Space Inc. (NorthStar), a Canadian company commercializing a suite of unique space-based information services to meet sustainability challenges on Earth and in space, today received an award from the U.S. Department of Commerce in recognition of its investments and contributions to the Canada-U.S. relationship.

In an increasingly congested and dangerous space environment, with thousands of new satellites and mega-constellations scheduled to launch, NorthStar's Space Information & Intelligence (SI^2) services will track hundreds of thousands of space objects, deliver accurate collision avoidance information and provide new levels of operational safety to governments and the commercial space industry.

"NorthStar is honoured to receive this award from the U.S. Department of Commerce that recognizes our contribution to the U.S. economy and to the Canada-U.S. relationship. NorthStar, the first commercial Space Situational Awareness (SSA) system operating from space, will contribute to the growth of the New Space economy by bringing richer information to multiple government and commercial stakeholders striving to achieve a safe and sustainable space environment. Canada and the United States, among other space-faring nations and the industries they support, are poised to benefit."

- Stewart Bain, CEO, NorthStar Earth & Space
